

Table 2. Estimated direct-API expenditure

DeepSeek V4.1 Flash | Official CNY price snapshot: 6 October 2026

Metric	Unit	Latch	OpenCode
Mean uncached-input cost (off-peak)	CNY	0.009932	0.007195
Mean cache-hit cost (off-peak)	CNY	0.001127	0.001565
Mean output cost (off-peak)	CNY	0.015141	0.021360
Mean total cost per task (off-peak)	CNY	0.026200	0.030119
Mean total cost per task (peak)	CNY	0.052400	0.060238
Total cost: 25 attempts (off-peak)	CNY	0.655006	0.752974
Total cost: 25 attempts (peak)	CNY	1.310012	1.505949
Cost per passed task (off-peak)	CNY	0.028479	0.034226

Off-peak rates per million tokens: uncached input CNY 1; cache-hit input CNY 0.02; output CNY 4.

Peak rates are twice off-peak rates. Means include all 25 attempts, including failed tasks.

Cost per passed task divides all-attempt expenditure by passes (Latch: 23; OpenCode: 22).

Estimates preserve observed cache hits. These are hypothetical DeepSeek API costs, not Go invoices.
