

Table 1. Task quality and execution efficiency

25 candidate tasks per agent | DeepSeek V4.1 Flash | Linux | 6 October 2026

Metric	Unit	Latch	OpenCode
Tasks passed	n / N	23/25 (92%)	22/25 (88%)
Independent checks passed	n / N	81/83	80/83
Timeouts	count	0	0
Mean wall time	s	34.78	49.92
Median wall time	s	31.30	49.55
90th-percentile wall time	s	55.60	79.90
Mean wall time: paired passes (n = 22)	s	33.41	50.17
Total input (including cache)	tokens	1,656,820	2,135,835
Total output (including reasoning)	tokens	94,632	133,497
Total tokens	tokens	1,751,452	2,269,332
Mean tokens per task	tokens	70,058	90,773
Input cache-hit fraction	%	85.0	91.6
Model turns	count	206	247
Tool calls	count	260	291

One attempt per task; at most three attempts running globally. All-attempt means include failures.
P90 uses nearest rank. Paired passes contain the same 22 tasks. Usage totals include child sessions.
Bold marks favorable point estimates, not statistical significance. CPU/RSS are not comparable here.
